Findings Report: Analysis of Services to Address Gender-based Violence in Three Countries
AIDSTAR-One conducted case studies in three countries where GBV services were available: Swaziland, Vietnam, and Ecuador. The case studies and this accompanying findings report aim to identify and share promising programmatic approaches and disseminate key elements of success for replication and scale-up.

Gender Equality and Climate Change
Research shows that climate change affects women and men differently. Confronted with this challenge, women and men also have different needs, priorities and possibilities, where the voice of women is not sufficiently heard and taken into account.

Building a Future for Women and Children: The 2012 Report
The report focuses on evidence-based solutions—health interventions proven to save lives—and on the health systems, policies, financing and broader contextual factors that affect the equitable delivery of these interventions to women and children.

Gender and Health Data and Statistics: An Annotated Resource Guide
These analyses aim to illustrate the effects of gender-related factors on the performance of health programs and resulting effects on health status.

Through the provision of training and resources, MADRE works hand in hand with local women's organizations to resolve urgent issues specific to their communities while simultaneously helping to establish long-term solutions to problems concerning human rights, economic development, education and health.
